"Intestinal Resorption in Paralytic Ileus."

Budapest, A Magyar Tudományos Akadémia V. Orvosi Tudományok Osztályának Közleményei, Vol XVII, No 2-3, 1966, pages 259-275.

Abstract: [Authors' Hungarian summary modified] In 39 patients, a total of 64 studies were conducted on protein ( $^{131}\text{I}$ -albumin), fat ( $^{131}\text{I}$ -triolein) and carbohydrate (dextrose) resorption, and the data obtained in acute abdominal disorders or in the days following abdominal surgery were evaluated mathematically. It was found that resorption of the macronutrients is significantly decreased in paralysis of the gastrointestinal system. The decrease is proportional to the degree and duration of the paralytic ileus. Attempts to demonstrate a decisive role played in these cases by the lack of pancreatic enzyme activity, decreased intestinal motility, intestinal distension, vagotomy, the type of operation performed, the time interval since the operation or prolonged hypotension were unsuccessful. Disturbances in intestinal resorption appear more frequently following more extensive trauma although they have been noted following lesser interventions as well.

"Cancers of Bronchial Origin Simulating Cystic Cavities."

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 5, 22 May 63, pp 245-247

Abstract: [Authors' English summary modified] Authors note that cases of pulmonary neoplasm are erroneously diagnosed as tuberculosis with increasing frequency. They cite three examples of cases in which the radiological picture of the primary cancer of bronchial origin resembled that of a pulmonary cyst and discuss the difficulties of correct diagnosis. They call attention to the interesting fact that in all cases the changes occurred in the region of the sixth segment, and suggest that findings at this site be checked with particular care and that suspected neoplastic cases be directed for early surgery. There are no references.

operational procedures are being developed and tested.  
Particular interest is being given to the development of a  
system for the control of the flow of information.

2. The Division of Information Systems, Department of  
Defense, is currently conducting a study of the  
feasibility of developing such a system.

TITLE: Determination of the distribution coefficient of zinc with radioisotope Zn sup 65 by the zone melting of aluminum

SOURCE: Academia scientiarum hungaricae. Acta technica, v. 51, no. 1-2, 1965, 63-79

TOPIC TAGS: zinc, radioisotope, aluminum, metal zone melting, distribution coefficient, metal crystallization

ABSTRACT: The  $\delta/D$  ratio (where  $\delta$  represents the rate of crystallization front advance and D represents the diffusion coefficient) for zinc in aluminum was determined by zone melting according to the techniques described by GELLI, D., and RORBA, M., (Alluminio, Vol 30, 1961, p 3). Various refining velocities and melted zone lengths were employed in the tests. The activity of the zinc isotope was continuously monitored. The parameters for the optimum zone-melting process for 99.99% pure aluminum with zinc impurity were determined. The method would be suitable for other metallic impurities in aluminum also. Orig. art. has: 11 figures, 4 tables, and 3 formulas. [SPRS: 33,732]
